

GATE AUTOMATION

SECURE, SAFE,
BEAUTIFUL,

SMART, RELIABLE

Dealer Stamp

REVO, is designed specifically for Pedestrian and Light Weight gates.

With a built on Night Light and aesthetically pleasing sight lines, REVO is the perfect choice when space is limited.

Our unique Quick Release System ensures you will never be stuck if you have a power failure and every kit is supplied with our water resistant Remote Control Handsets.

RAY: The Swing Gate operator of the 21st Century. For gates up to 8 metres, a built in Night Light, Remote Control and unique Quick Release System ensures your every need is met.

Modern sight lines, 21st Century technology and safety a priority.

SUN & TURBO: Our Automatic Sliding Gate Operators come with a Night Light and Remote Control.

Beautifully designed they sit well in any environment and with a Quick Release System, Slowdown function and Safety Features, they offer an ideal solution for gates up to 4000kg.

With Photoelectric Beams, Safety Edges and Resistance Measuring technology, you can be assured this is the safest Sliding Gate Operator on the market.

Bronze gears ensure it is also the most reliable.

STIK

Is our low voltage lighting system that compliments the entire range of gate operators. STIK is available as an Up-Lighter or as a Down-Lighter and can be fixed to any surface including soft surfaces such as a gravel drive or garden border.

Beautiful and safe the STIK Lighting system can be integrated into the Gate Operator Control System and individually operated by the Handset

Our Fob Handsets offer great looks with durability and functionality.

Available in a range of stunning colours, all our Fobs are water resistant and have multi-channel functionality giving you complete control over your Gate Operator and Lighting System whilst the built in Key allows you to manually open the gate should you experience a power failure.

Practicality with beauty.

When it comes to safety, nothing is left to chance. Our system is installed with a range of safety devices as standard, including Photo Electric Beams.

But it doesn't stop there. Our Gate Operators use the latest technology to incorporate resistive measurement, which analyses the resistive force on the motor. Any change in that resistance and the gate will stop and open.

That same technology allows our authorised dealer to programme your operator and store your gate settings for future servicing.

The entire range is European manufactured and CE Certified. Quality, Safety and Reliability have been our watchwords for over 50 years.
